This quick guide shows you how to use the Interface for visualizing xml content.

XML_GUI.exe is a stand alone application: when you double click it, the Javascript (which actually is the graphical interface) contained in XML_GUI.html is automatically launched.

Always keep XML_GUI.exe, XML_GUI.html, exampleUtil.js and the subfolder vis-4.21.0 in the same location.
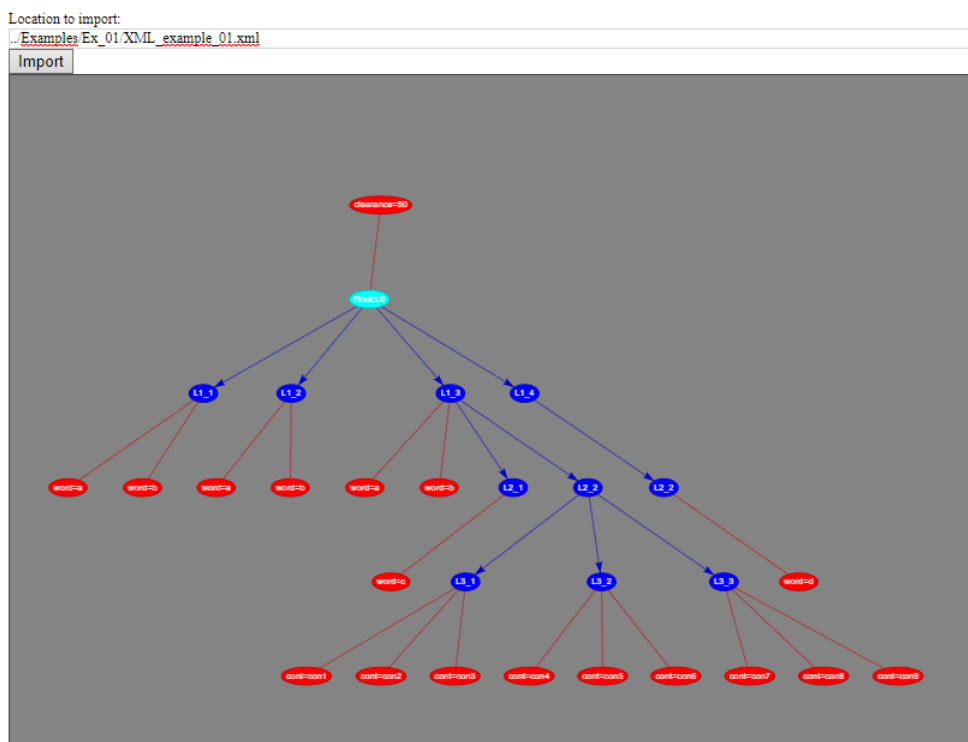

After have launched XML_GUI.exe the following window will appear:

Location to import:

Import

To see the content of a new XML document, put the location of this latter in the highlighted bar (the location can be absolute or relative w.r.t. the location of XML_GUI.exe):

Put the location of the xml file here

Then click the Import button and the structure of the selected XML document will appear:

The cyan node is the root, while all the blue ones are the subtags of the document. Red nodes are the properties related to every tag.
